

SAFETY DATA SHEET

according to Regulation (EC) No. 1907/2006

CAUSTIC SODA, microprills

Version 1

Revision Date 24.07.2019

Print Date 29.10.2019

GB / EN

SECTION 1: IDENTIFICATION OF THE SUBSTANCE/MIXTURE AND OF THE COMPANY/UNDERTAKING

1.1 Product identifier

Trade name : CAUSTIC SODA, microprills

Substance name : Sodium hydroxide

REACH Registration Number : 01-2119457892-27-0035

1.2 Relevant identified uses of the substance or mixture and uses advised against

Use of the Substance/Mixture : Specific use(s): Industrial and professional use
Consumer use
Refer to attached exposure scenario Annex.

1.3 Details of the supplier of the safety data sheet

Company : Nouryon Industrial Chemicals bv
Velperweg 76
NL 6824 BM Arnhem
Netherlands

Telephone : +31263664433

Telefax : +31263665830

E-mail address : Industrialchemicals.csd@nouryon.com

1.4 Emergency telephone number

Emergency telephone number : 24 hours emergency response number: +31 57 06 79211

SECTION 2: HAZARDS IDENTIFICATION

2.1 Classification of the substance or mixture

Classification (REGULATION (EC) No 1272/2008)

Corrosive to metals, 1, H290

Skin corrosion, 1A, H314

Serious eye damage, 1, H318

For the full text of the H-Statements mentioned in this Section, see Section 16.

CAUSTIC SODA, microprills

Version 1

Revision Date 24.07.2019

Print Date 29.10.2019

GB / EN

2.2 Label elements

Labelling (REGULATION (EC) No 1272/2008)

Pictogram

:

Signal word

: Danger

Hazard statements

: H290
H314

May be corrosive to metals.
Causes severe skin burns and eye damage.

Precautionary statements

: **Prevention:**

P260
P280

Do not breathe dust or mist.
Wear protective gloves/ protective clothing/ eye protection/ face protection.

Response:

P301 + P330 + P331

IF SWALLOWED: Rinse mouth. Do NOT induce vomiting.

P303 + P361 + P353

IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water.

P305 + P351 + P338

+ P310 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Immediately call a POISON CENTER/doctor.

P390

Absorb spillage to prevent material damage.

For the full list of P-statements please see section 16.

Hazardous components which must be listed on the label:

Sodium hydroxide

1310-73-2

2.3 Other hazards

No further data available.

PBT and vPvB assessment

: This substance/mixture contains no components considered to be either persistent, bioaccumulative and toxic (PBT), or very persistent and very bioaccumulative (vPvB) at levels of 0.1% or higher.

CAUSTIC SODA, microprills

Version 1

Revision Date 24.07.2019

Print Date 29.10.2019

GB / EN

SECTION 3: COMPOSITION/INFORMATION ON INGREDIENTS

3.1 Substances

Pure substance/mixture : Substance
Formula : NaOH

CAS-No. : 1310-73-2

Hazardous substance

Chemical name	PBT vPvB OEL	CAS-No. EC-No. REACH No.	Classification (REGULATION (EC) No 1272/2008)	Concentration [%]
Sodium hydroxide		1310-73-2 215-185-5 01-2119457892-27	Met. Corr. 1; H290 Skin Corr. 1A; H314 Eye Dam. 1; H318	100

For the full text of the H-Statements mentioned in this Section, see Section 16.

REACH - Candidate List of Substances of Very High Concern for Authorisation (Article 59).

Status : Not applicable

SECTION 4: FIRST AID MEASURES

4.1 Description of first aid measures

General advice : Immediate medical attention is required.
Move out of dangerous area.
Show this safety data sheet to the doctor in attendance.

If inhaled : Remove to fresh air.
Keep patient warm and at rest.
Rinse nose and mouth with water.

In case of skin contact : Take off contaminated clothing and shoes immediately.
Immediate medical treatment is necessary as untreated wounds from corrosion of the skin heal slowly and with difficulty.

In case of eye contact : Rinse with plenty of water.
Get medical attention immediately. Continue to rinse during transport.
Remove contact lenses.
Protect unharmed eye.
Keep eye wide open while rinsing.
Small amounts splashed into eyes can cause irreversible tissue damage and blindness.

If swallowed : Clean mouth with water and drink afterwards plenty of water.
Never give anything by mouth to an unconscious person.
Take victim immediately to hospital.
Do not induce vomiting! May cause chemical burns in mouth

CAUSTIC SODA, microprills

Version 1

Revision Date 24.07.2019

Print Date 29.10.2019

GB / EN

and throat.

4.2 Most important symptoms and effects, both acute and delayed

Symptoms	: Inhalation may provoke the following symptoms: Irritation Corrosive to skin Corrosive to eyes Corrosive to respiratory system.
Risks	: Risk of delayed pulmonary oedema. Causes serious eye damage. Causes severe burns.

4.3 Indication of any immediate medical attention and special treatment needed

Treatment	: Treat symptomatically.
-----------	--------------------------

SECTION 5: FIREFIGHTING MEASURES

5.1 Extinguishing media

Suitable extinguishing media	: Use extinguishing measures that are appropriate to local circumstances and the surrounding environment.
------------------------------	---

5.2 Special hazards arising from the substance or mixture

Specific hazards during firefighting / Specific hazards arising from the chemical	: Water spray may be ineffective unless used by experienced firefighters. Do not allow run-off from fire fighting to enter drains or water courses. May form toxic or explosive vapours in presence of certain metals. Risks of ignition followed by flame propagation or secondary explosions shall be prevented by avoiding accumulation of dust, e.g. on floors and ledges.
Combustion products	: No hazardous combustion products are known

5.3 Advice for firefighters

Special protective equipment for firefighters	: In the event of fire, wear self-contained breathing apparatus.
Further information	: Collect contaminated fire extinguishing water separately. This must not be discharged into drains. Fire residues and contaminated fire extinguishing water must be disposed of in accordance with local regulations.

SECTION 6: ACCIDENTAL RELEASE MEASURES

6.1 Personal precautions, protective equipment and emergency procedures

Personal precautions	: Use personal protective equipment. Wear respiratory protection. Avoid dust formation. Avoid breathing dust.
----------------------	--

CAUSTIC SODA, microprills

Version 1

Revision Date 24.07.2019

Print Date 29.10.2019

GB / EN

Ensure adequate ventilation.

Emergency measures on accidental release : Evacuate personnel to safe areas.
Only qualified personnel equipped with suitable protective equipment may intervene.
Prevent unauthorised persons entering the zone.

6.2 Environmental precautions

Environmental precautions : Try to prevent the material from entering drains or water courses.

6.3 Methods and materials for containment and cleaning up

Methods for cleaning up / : Pick up and arrange disposal without creating dust.
Methods for containment : Keep in suitable, closed containers for disposal.

6.4 Reference to other sections

For disposal considerations see section 13.
For personal protection see section 8.

SECTION 7: HANDLING AND STORAGE

7.1 Precautions for safe handling

Advice on safe handling : For personal protection see section 8.
Avoid creating dust.
Do not breathe vapours/dust.
Keep away from heat/sparks/open flames/hot surfaces. No smoking.
Smoking, eating and drinking should be prohibited in the application area.
Dispose of rinse water in accordance with local and national regulations.

Advice on protection against fire and explosion : Provide appropriate exhaust ventilation at places where dust is formed.
No sparking tools should be used.

7.2 Conditions for safe storage, including any incompatibilities

Requirements for storage areas and containers : Keep in a dry place.
Store in closed dark containers made of anti-corrosive material.
Store at room temperature in the original container.
Keep container tightly closed.
Keep only in original container.

Packaging material : Unsuitable material: Light metals, Aluminium, Copper, Zinc

Other data : No decomposition if stored and applied as directed.

7.3 Specific end use(s)

Specific use(s) : Refer to attached exposure scenario Annex.

CAUSTIC SODA, microprills

Revision Date 24.07.2019

Print Date 29.10.2019

GB / EN

SECTION 8: EXPOSURE CONTROLS/PERSONAL PROTECTION

8.1 Control parameters

Components with workplace control parameters

Components	CAS-No.	Value	Control parameters	Update	Basis	Form of exposure
Sodium hydroxide	1310-73-2	STEL	2 mg/m ³	2005-04-06	GB EH40	

ACGIH: American Conference of Governmental Industrial Hygienists
AGW: Arbeitsplatzgrenzwert
BEI: Biological Exposure Index
MAC: Maximum Allowable Concentration
NIOSH: National Institute for Occupational Safety and Health
OEL: OEL: Occupational exposure limit.
STEL: Short term exposure limit
TRGS: Technische Regel für Gefahrstoffe
TWA: Time Weighted Average

Derived No Effect Level (DNEL) according to Regulation (EC) No. 1907/2006

Substance name	End Use	Exposure routes	Potential health effects	Value
Sodium hydroxide	Workers	Inhalation	Long-term local effects	1.0 mg/m ³
	Consumers	Inhalation	Long-term local effects	1.0 mg/m ³

8.2 Exposure controls

Engineering controls

Provide appropriate exhaust ventilation at places where dust is formed.
Ensure that eyewash stations and safety showers are close to the workstation location.

Personal protective equipment

Respiratory protection : Half mask with a particle filter P2 (EN 143)

Hand protection

: PVC

Break through time: > 480 min

Glove thickness: > 0.5 mm

butyl-rubber

Break through time: > 480 min

Glove thickness: > 0.5 mm

Fluorinated rubber

Break through time: > 480 min

Glove thickness: 0.35 - 0.4 mm

Nitrile rubber

Break through time: > 480 min

Glove thickness: 0.35 - 0.4 mm

Protective gloves complying with EN 374.

CAUSTIC SODA, microprills

Version 1

Revision Date 24.07.2019

Print Date 29.10.2019

GB / EN

Eye protection : Tightly fitting safety goggles
Wear face-shield and protective suit for abnormal processing problems.

Skin and body protection : Protective suit

Hygiene measures : Handle in accordance with good industrial hygiene and safety practice.
Wash hands before breaks and at the end of workday.

Environmental exposure controls

General advice : Try to prevent the material from entering drains or water courses.

SECTION 9: PHYSICAL AND CHEMICAL PROPERTIES

9.1 Information on basic physical and chemical properties

Appearance

Form : solid
Prills.

Colour : white

Odour : odourless

Odour Threshold : Not applicable

Safety data

pH : > 14 at 100 g/l solution
at 20 °C

Melting point : 323 °C
at 1,013 hPa

Boiling point : 1,388 °C
at 1,013 hPa

Flash point : Not applicable

Evaporation rate : Not applicable

Flammability (solid, gas) : The product is not flammable.

Flammability (liquids) : Not applicable

Lower explosion limit : Not applicable

Upper explosion limit : Not applicable

Vapour pressure : Not applicable

Relative vapour density : Not applicable

CAUSTIC SODA, microprills

Version 1

Revision Date 24.07.2019

Print Date 29.10.2019

GB / EN

Relative density	: 2.13
Bulk density	: 1,100 - 1,200 kg/m ³
Water solubility	: 1,000 g/l at 25 °C 3,420 g/l at 100 °C
Solubility in other solvents	: Methanol 238 g/l at 20 °C Ethanol 139 g/l at 20 °C
Partition coefficient: n-octanol/water	: Not applicable, Inorganic compound
Auto-ignition temperature	: Not applicable
Decomposition temperature	: Not applicable
Viscosity, dynamic	: Not applicable
Viscosity, kinematic	: Not applicable
Explosive properties	: Not explosive
Oxidizing properties	: Not classified as oxidising.

9.2 Other information

Corrosive to metals : Corrosive to metals

This safety datasheet only contains information relating to safety and does not replace any product information or product specification.

SECTION 10: STABILITY AND REACTIVITY

10.1 Reactivity

Stable under normal conditions.

10.2 Chemical stability

Stable under recommended storage conditions.

10.3 Possibility of hazardous reactions

In contact with metals generates hydrogen gas, which together with air can form explosive mixtures.

The product reacts with water and generates heat.

Reacts with the following substances:

Acids

Alcohols

Exothermic reaction with strong acids.

10.4 Conditions to avoid

Conditions to avoid : Extremes of temperature and direct sunlight.
Exposure to moisture

CAUSTIC SODA, microprills

Version 1

Revision Date 24.07.2019

Print Date 29.10.2019

GB / EN

10.5 Incompatible materials

Materials to avoid : Metals
Strong acids
Flammable materials

10.6 Hazardous decomposition products

Hazardous decomposition products : No hazardous decomposition products are known.

Thermal decomposition : Not applicable

SECTION 11: TOXICOLOGICAL INFORMATION

11.1 Information on toxicological effects

Product information:

Acute toxicity : Not classified based on available information.

Skin corrosion/irritation : Causes severe burns.

Serious eye damage/eye irritation : Causes serious eye damage.

Respiratory or skin sensitisation : Respiratory sensitisation: Not classified based on available information.
Skin sensitisation: Not classified based on available information.

Germ cell mutagenicity : Not classified based on available information.

Carcinogenicity : Not classified based on available information.

Reproductive toxicity : Not classified based on available information.

STOT - single exposure : Not classified based on available information.

STOT - repeated exposure : Not classified based on available information.

Aspiration hazard : Not classified based on available information.

Further information : No further data available.

Toxicology data for the components:

Sodium hydroxide

Acute toxicity:

Skin corrosion/irritation : Result: Causes severe burns.

Serious eye damage/eye irritation : Result: Risk of serious damage to eyes.

Respiratory or skin sensitisation : Result: Does not cause skin sensitisation.

Germ cell mutagenicity

CMR effects Mutagenicity : In vivo tests did not show mutagenic effects, Tests on bacterial or mammalian cell cultures did not show mutagenic effects.

CAUSTIC SODA, microprills

Version 1

Revision Date 24.07.2019

Print Date 29.10.2019

GB / EN

Genotoxicity in vitro : In vitro tests did not show mutagenic effects

SECTION 12: ECOLOGICAL INFORMATION

Product information:

Ecotoxicology Assessment

Additional ecological information : Raises the pH.
An environmental hazard cannot be excluded in the event of unprofessional handling or disposal.
Harmful to aquatic life.

12.1 Toxicity

Components:

Ecotoxicology Assessment

Sodium hydroxide

Long-term (chronic) aquatic hazard : This product has no known ecotoxicological effects.

Test result

Sodium hydroxide

Toxicity to fish : 35 - 189 mg/l
Information taken from reference works and the literature.

Toxicity to daphnia and other aquatic invertebrates : EC50: 40.4 mg/l
Exposure time: 48 h
Species: Ceriodaphnia (water flea)
Test Type: Immobilization
Method: Other guidelines

12.2 Persistence and degradability

Product information : No information available.

Components:

Sodium hydroxide

Biodegradability : Result: Not applicable

12.3 Bioaccumulative potential

Product information : No information available.

Components:

Sodium hydroxide

Bioaccumulation : Bioaccumulation is unlikely.

12.4 Mobility in soil

Product information : No information available.

Components:

Sodium hydroxide

Mobility : Stays dissolved in water
Can be leached out from soil.

Distribution among environmental compartments : Transport to air is not expected.

CAUSTIC SODA, microprills

Version 1

Revision Date 24.07.2019

Print Date 29.10.2019

GB / EN

12.5 Results of PBT and vPvB assessment

Product information:

PBT and vPvB assessment : This substance/mixture contains no components considered to be either persistent, bioaccumulative and toxic (PBT), or very persistent and very bioaccumulative (vPvB) at levels of 0.1% or higher.

Components:

Sodium hydroxide

PBT and vPvB assessment : This substance is not considered to be a PBT (Persistent, Bioaccumulation, Toxic)
This substance is not considered to be vPvB (very Persistent nor very Bioaccumulating)

12.6 Other adverse effects

Product information : No information available.

Components:

Sodium hydroxide

Biochemical Oxygen Demand (BOD) : No data available

SECTION 13: DISPOSAL CONSIDERATIONS

13.1 Waste treatment methods

Product : The product should not be allowed to enter drains, water courses or the soil.
Do not contaminate ponds, waterways or ditches with chemical or used container.
Hazardous waste
Dispose of contents/container in accordance with local regulation.

Contaminated packaging : Empty remaining contents.
Dispose of as unused product.

SECTION 14: TRANSPORT INFORMATION

14.1 UN number

ADR : UN 1823
RID : UN 1823
IMDG-Code : UN 1823
IATA-DGR : UN 1823

14.2 Proper shipping name

ADR : SODIUM HYDROXIDE, SOLID
RID : SODIUM HYDROXIDE, SOLID
IMDG-Code : SODIUM HYDROXIDE, SOLID
IATA-DGR : Sodium hydroxide, solid

14.3 Transport hazard class

ADR : 8
RID : 8
IMDG-Code : 8
IATA-DGR : 8

CAUSTIC SODA, microprills

Revision Date 24.07.2019

Print Date 29.10.2019

GB / EN

14.4 Packing group

ADR

Packing group : II
Classification Code : C6
Hazard Identification Number : 80
Labels : 8
Tunnel restriction code : (E)

RID

Packing group : II
Classification Code : C6
Hazard Identification Number : 80
Labels : 8

IMDG-Code

Packing group : II
Labels : 8
EmS Code : F-A, S-B
Remarks : Handle with care.

IATA-DGR

Packing instruction (cargo aircraft) : 863
Packing instruction (passenger aircraft) : 859
Packing instruction (LQ) : Y844
Packing group : II
Labels : 8
Remarks : Handle with care.

14.5 Environmental hazards

ADR

Environmentally hazardous : no

RID

Environmentally hazardous : no

IMDG-Code

Marine pollutant : no

IATA-DGR

Environmentally hazardous : no

14.6 Special precautions for user

Remarks : Handle with care.

14.7 Transport in bulk according to Annex II of MARPOL 73/78 and the IBC Code

Not applicable for product as supplied.

SECTION 15: REGULATORY INFORMATION

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture

Seveso III: Directive 2012/18/EU of the European Parliament and of the Council on the control of major-accident hazards involving dangerous substances.

Not applicable

Notification status

DSL	: YES. All components of this product are on the Canadian DSL
AICS	: YES. On the inventory, or in compliance with the inventory
NZIoC	: YES. On the inventory, or in compliance with the inventory
ENCS	: YES. On the inventory, or in compliance with the inventory
ISHL	: YES. On the inventory, or in compliance with the inventory
KECI	: YES. On the inventory, or in compliance with the inventory
PICCS	: YES. On the inventory, or in compliance with the inventory
IECSC	: YES. On the inventory, or in compliance with the inventory
TCSI	: YES. On the inventory, or in compliance with the inventory
TSCA	: YES. All chemical substances in this product are either listed on the TSCA Inventory or in compliance with a TSCA Inventory exemption.

For explanation of abbreviation see section 16.

15.2 Chemical safety assessment

Sodium hydroxide	: A Chemical Safety Assessment has been carried out for this substance.
------------------	---

SECTION 16: OTHER INFORMATION

Full text of H-Statements referred to under sections 2 and 3.

H290	: May be corrosive to metals.
H314	: Causes severe skin burns and eye damage.
H318	: Causes serious eye damage.

Full list of P-statements.

Prevention:

P234	Keep only in original container.
P260	Do not breathe dust or mist.
P280	Wear protective gloves/ protective clothing/ eye protection/ face protection.

Response:

P303 + P361 + P353	IF ON SKIN (or hair): Remove/ Take off immediately all contaminated clothing. Rinse skin with water/ shower.
P305 + P351 + P338	IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
P310	Immediately call a POISON CENTER/doctor.
P390	Absorb spillage to prevent material damage.

Storage:

P406	Store in corrosive resistant stainless steel container with a resistant inner liner.
------	--

Disposal:

P501	Dispose of contents/ container to an approved waste disposal plant.
------	---

Full text of other abbreviations

Annex :

Manufacture

Industrial use

Professional use

Consumer use

CAUSTIC SODA, microprills

Version 1

Revision Date 24.07.2019

Print Date 29.10.2019

GB / EN

1. Short title of Exposure Scenario: Manufacture

Main User Groups	: SU 3: Industrial uses: Uses of substances as such or in preparations at industrial sites
Environmental Release Categories	: ERC1: Manufacture of the substance
Process categories	: PROC1: Use in closed process, no likelihood of exposure PROC2: Use in closed, continuous process with occasional controlled exposure PROC3: Use in closed batch process (synthesis or formulation) PROC4: Use in batch and other process (synthesis) where opportunity for exposure arises PROC8b: Transfer of substance or preparation (charging/ discharging) from/ to vessels/ large containers at dedicated facilities PROC9: Transfer of substance or preparation into small containers (dedicated filling line, including weighing)

2.1 Contributing scenario controlling environmental exposure for: ERC1: Manufacture of the substance

Technical conditions and measures / Organizational measures

Water	: Risk management measures related to the environment aim to avoid discharging NaOH solutions into municipal waste water or to surface water. In case such discharges are expected to cause significant pH changes then regular control of the pH value during introduction into open waters is required. In general discharges should be carried out such that pH changes in receiving surface waters are minimised. In general most aquatic organisms can tolerate pH values in the range of 6-9. This is also reflected in the description of standard OECD tests with aquatic organisms.
-------	--

2.2 Contributing scenario controlling worker exposure for: All PROCs: Applicable to all above mentioned process categories.

Product characteristics

Concentration of the Substance in Mixture/Article	: Covers the percentage of the substance in the product up to 100 % (unless stated differently).
Physical Form (at time of use)	: liquid

Frequency and duration of use

Exposure duration (per shift)	: 1 - 600 min
Frequency of use	: 200 days/year

GB / EN

Organisational measures to prevent /limit releases, dispersion and exposure

Workers in the risky process/areas identified should be trained a) to avoid to work without respiratory protection and b) to understand the corrosive properties and, especially, the respiratory inhalation effects of sodium hydroxide and c) to follow the safer procedures instructed by the employer.

The employer has also to ascertain that the required personal protection equipment is available and used according to instructions.

Conditions and measures related to personal protection, hygiene and health evaluation

Respiratory protection: In case of dust or aerosol formation (e.g. spraying): use respiratory protection with approved filter (P2) (required)

Hand protection: impervious chemical resistant protective gloves.

- material: butyl-rubber, PVC, polychloroprene with natural latex liner, material thickness: 0.5 mm, breakthrough time: > 480 min

- material: nitrile-rubber, fluorinated rubber, material thickness: 0.35-0.4 mm, breakthrough time: > 480 min

Eye protection: If splashes are likely to occur, wear tightly fitting chemical resistant safety goggles, face-shield.

If splashes are likely to occur, wear suitable protective clothing, aprons, shield and suits, rubber or plastic boots, rubber or plastic boots.

Additional good practice advice beyond the REACH Chemical Safety Assessment

Additional good practice advice : Good practice:

- Replace, where appropriated, manual processes by automated and/or closed processes. This would avoid irritating mists, sprayings and subsequent potential splashes
- Use closed systems or covering of open containers (e.g. screens)
- Transport over pipes, technical barrel filling/emptying of barrel with automatic systems (suction pumps etc.)
- Use of pliers, grip arms with long handles with manual use "to avoid direct contact and exposure by splashes (no working over one's head)", Local exhaust ventilation is not required but good practice., General ventilation is good practice unless local exhaust ventilation

3. Exposure estimation and reference to its source

Workers

Contributing Scenario	Exposure Assessment Method	Specific conditions	Value	Level of Exposure	RCR
CS53	Based on measurements.	Local exhaust ventilation	Acute inhalation local exposure	0.269 mg/m3	0.269
CS53	Based on	Local exhaust ventilation	Chronic	0.269 mg/m3	0.269

CAUSTIC SODA, microprills

Revision Date 24.07.2019

Print Date 29.10.2019

GB / EN

	measurements.		inhalation local exposure		
--	---------------	--	---------------------------------	--	--

: Filling

CS53: Pelletizing

The risk assessment for the environment is only applicable for the aquatic environment, when applicable including sewage treatment plants (STPs)/ waste water treatment plants (WWTPs), as the emissions of NaOH in the different lifecycle stages (production and use) mainly apply to (waste) water. The aquatic effect and risk assessment will only deal with the effect on organisms/ecosystems due to possible pH changes related to OH⁻ discharges, as the toxicity of the Na⁺ ion is expected to be insignificant compared to the (potential) pH effect. Only the local scale will be addressed, including STPs or WWTPs when applicable, both for production and industrial use. Any effects that might occur would be expected to take place on a local.

The high water solubility and very low vapour pressure indicate that NaOH will be found predominantly in water. Significant emissions to air are not expected due to the very low vapour pressure of NaOH. Significant emissions to the terrestrial environment are not expected either. The sludge application route is not relevant for the emission to agricultural soil, as no sorption of NaOH to particulate matter will occur in STPs/WWTPs.

The exposure assessment for the aquatic environment will only deal with the possible pH changes in STP effluent and surface water related to the OH⁻ discharges at the local scale.

4. Guidance to Downstream User to evaluate whether he works inside the boundaries set by the Exposure Scenario

If scaling reveals a condition of unsafe use (i.e., RCRs > 1), additional RMMs or a site-specific chemical safety assessment is required.

1. Short title of Exposure Scenario: Industrial use

- Main User Groups : SU 3: Industrial uses: Uses of substances as such or in preparations at industrial sites
- Environmental Release Categories : ERC1, ERC2, ERC4, ERC6a, ERC6b, ERC7, ERC8a, ERC8b, ERC8d, ERC9a, Other ERCs: Manufacture of the substance, Formulation of preparations, Use of non-reactive processing aid at industrial site (no inclusion into or onto article), Use of intermediate, Use of reactive processing aid at industrial site (no inclusion into or onto article), Industrial use of substances in closed systems, Wide dispersive indoor use of processing aids in open systems, Wide dispersive indoor use of reactive substances in open systems, Wide dispersive outdoor use of processing aids in open systems, Wide dispersive indoor use of substances in closed systems, The environmental release categories mentioned above are assumed to be the most important ones but other industrial environmental release categories could also be possible (ERC 1 – 12).
- Process categories : PROC1: Use in closed process, no likelihood of exposure
PROC2: Use in closed, continuous process with occasional controlled exposure
PROC3: Use in closed batch process (synthesis or formulation)
PROC4: Use in batch and other process (synthesis) where opportunity for exposure arises
PROC5: Mixing or blending in batch processes for formulation of preparations and articles (multistage and/ or significant contact)
PROC8a: Transfer of substance or preparation (charging/ discharging) from/ to vessels/ large containers at non-dedicated facilities
PROC8b: Transfer of substance or preparation (charging/ discharging) from/ to vessels/ large containers at dedicated facilities
PROC9: Transfer of substance or preparation into small containers (dedicated filling line, including weighing)
PROC10: Roller application or brushing
PROC11: Non-industrial spraying
PROC13: Treatment of articles by dipping and pouring
PROC15: Use as laboratory reagent
Other PROCs: The process categories mentioned above are assumed to be the most important ones but other process categories could also be possible (PROC 1 – 27).

2.1 Contributing scenario controlling environmental exposure for: All ERCs: Applicable to all above mentioned environmental release categories.

Technical conditions and measures / Organizational measures

Water : Risk management measures related to the environment aim to avoid discharging NaOH solutions into municipal waste water or to surface water. In case such discharges are expected to cause significant pH changes then regular control of the pH value during introduction into open waters is required. In general discharges should be carried out such that pH changes in receiving surface waters are minimised. In general most aquatic organisms can tolerate pH values in the range of 6-9. This is also reflected in the description of standard OECD tests with aquatic organisms.

2.2 Contributing scenario controlling worker exposure for: All PROCs: Applicable to all above mentioned process categories.

Product characteristics

Concentration of the Substance in Mixture/Article : Covers the percentage of the substance in the product up to 100 % (unless stated differently).
Physical Form (at time of use) : liquid

Frequency and duration of use

Exposure duration (per shift) : 1 - 600 min
Frequency of use : 200 days/year

Organisational measures to prevent /limit releases, dispersion and exposure

Workers in the risky process/areas identified should be trained a) to avoid to work without respiratory protection and b) to understand the corrosive properties and, especially, the respiratory inhalation effects of sodium hydroxide and c) to follow the safer procedures instructed by the employer. The employer has also to ascertain that the required personal protection equipment is available and used according to instructions.

Conditions and measures related to personal protection, hygiene and health evaluation

Respiratory protection: In case of dust or aerosol formation (e.g. spraying): use respiratory protection with approved filter (P2) (required)

Hand protection: impervious chemical resistant protective gloves.

- material: butyl-rubber, PVC, polychloroprene with natural latex liner, material thickness: 0.5 mm, breakthrough time: > 480 min

- material: nitrile-rubber, fluorinated rubber, material thickness: 0.35-0.4 mm, breakthrough time: > 480 min

Eye protection: If splashes are likely to occur, wear tightly fitting chemical resistant safety goggles, face-shield.

If splashes are likely to occur, wear suitable protective clothing, aprons, shield and suits, rubber or plastic boots, rubber or plastic boots.

Additional good practice advice beyond the REACH Chemical Safety Assessment

Additional good practice advice : Good practice:
• Replace, where appropriated, manual processes by automated and/or closed processes. This would avoid irritating mists, sprayings and subsequent potential splashes

GB / EN

- Use closed systems or covering of open containers (e.g. screens)
- Transport over pipes, technical barrel filling/emptying of barrel with automatic systems (suction pumps etc.)
- Use of pliers, grip arms with long handles with manual use "to avoid direct contact and exposure by splashes (no working over one's head)", Local exhaust ventilation is not required but good practice., General ventilation is good practice unless local exhaust ventilation

3. Exposure estimation and reference to its source

Workers

Contributing Scenario	Exposure Assessment Method	Specific conditions	Value	Level of Exposure	RCR
All PROCs	Based on measurements.	various	Acute inhalation local exposure	< 1 mg/m3	< 1
All PROCs	Based on measurements.	various	Chronic inhalation local exposure	< 1 mg/m3	< 1

All PROCs: Applicable to all above mentioned process categories.

The risk assessment for the environment is only applicable for the aquatic environment, when applicable including sewage treatment plants (STPs)/ waste water treatment plants (WWTPs), as the emissions of NaOH in the different lifecycle stages (production and use) mainly apply to (waste) water. The aquatic effect and risk assessment will only deal with the effect on organisms/ecosystems due to possible pH changes related to OH⁻ discharges, as the toxicity of the Na⁺ ion is expected to be insignificant compared to the (potential) pH effect. Only the local scale will be addressed, including STPs or WWTPs when applicable, both for production and industrial use. Any effects that might occur would be expected to take place on a local.

The high water solubility and very low vapour pressure indicate that NaOH will be found predominantly in water. Significant emissions to air are not expected due to the very low vapour pressure of NaOH. Significant emissions to the terrestrial environment are not expected either. The sludge application route is not relevant for the emission to agricultural soil, as no sorption of NaOH to particulate matter will occur in STPs/WWTPs.

The exposure assessment for the aquatic environment will only deal with the possible pH changes in STP effluent and surface water related to the OH⁻ discharges at the local scale.

4. Guidance to Downstream User to evaluate whether he works inside the boundaries set by the Exposure Scenario

Frequency and duration of use

Exposure duration (per shift) : 1 - 600 min
Frequency of use : 200 days/year

Organisational measures to prevent /limit releases, dispersion and exposure

NaOH products with a concentration > 2% are corrosive, therefore the prescribed personal protective equipment is compulsory.

Dilutions of NaOH containing less than 2% of the substance do not have corrosive properties. For products with a NaOH concentration between 0.5% and 2% the prescribed personal protective equipment is good practice. No protection is required when NaOH concentration is < 0.5%

Conditions and measures related to personal protection, hygiene and health evaluation

Respiratory protection: In case of dust or aerosol formation (e.g. spraying): use respiratory protection with approved filter (P2) (required)

Hand protection: In case of potential dermal contact: use impervious chemical resistant protective gloves

Eye protection: If splashes are likely to occur, wear tightly fitting chemical resistant safety goggles, face-shield.

If splashes are likely to occur, wear suitable protective clothing, aprons, shield and suits, rubber or plastic boots, rubber or plastic boots.

1. Short title of Exposure Scenario: Consumer use

- Main User Groups : SU 21: Consumer uses: Private households (= general public = consumers)
- Chemical product category : PC20: Processing aids such as pH-regulators, flocculants, precipitants, neutralization agents
PC35: Washing and cleaning products
PC39: Cosmetics, personal care products
: The other PCs are not explicitly considered in this exposure scenario. However, NaOH can also be used in other PCs in low concentrations e.g. PC3 (up to 0.01%), PC8 (up to 0.1%), PC28 and PC31 (up to 0.002%) but it can be used also in the remaining product categories (PC 0-40).

2.2 Contributing scenario controlling consumer exposure for: PC20, PC35, PC39: Processing aids such as pH-regulators, flocculants, precipitants, neutralization agents, Washing and cleaning products, Cosmetics, personal care products

Conditions and measures related to protection of consumer (e.g. behavioural advice, personal protection and hygiene)

- Application Route : Consumer uses (all except batteries)
- Consumer Measures : Measured related to the design of the product
- It is required to use resistant labelling-package to avoid its auto-damage and loss of the label integrity, under normal use and storage of the product. The lack of quality of the package provokes the physical loss of information on hazards and use instructions.
 - It is required that household chemicals, containing sodium hydroxide for more than 2%, which may be accessible to children should be provided with a child-resistant fastening (currently applied) and a tactile warning of danger (Adaptation to Technical Progress of the Directive 1999/45/EC, annex IV, Part A and Article 15(2) of Directive 67/548 in the case of, respectively, dangerous preparations and substances intended for domestic use). This would prevent accidents by children and other sensitive groups of society.
 - It is required that improved use instructions, and product information should always be provided to the consumers. This clearly can efficiently reduce the risk of misuse. For reducing the number of accidents in which (young) children or elderly people are involved, it should be advisable to use these products in the absence of children or other potential sensitive groups. To prevent improper use of sodium hydroxide, instructions for use should contain a warning against dangerous mixtures
 - It is advisable to deliver only in very viscous preparations
 - It is advisable to delivery only in small amounts, Instructions

	addressed to consumers: <ul style="list-style-type: none">• Keep out of reach of children.• Do not apply product into ventilator openings or slots.,Respiratory protection: In case of dust or aerosol formation (e.g. spraying): use respiratory protection with approved filter (P2) (required),Hand protection: In case of potential dermal contact: use impervious chemical resistant protective gloves,Eye protection: If splashes are likely to occur, wear tightly fitting chemical resistant safety goggles, face-shield.
Remarks	: NaOH products with a concentration > 2% are corrosive, therefore the prescribed personal protective equipment is compulsory. Dilutions of NaOH containing less than 2% of the substance do not have corrosive properties. For products with a NaOH concentration between 0.5% and 2% the prescribed personal protective equipment is good practice. No protection is required when NaOH concentration is < 0.5%
Application Route	: Consumer uses (batteries)
Consumer Measures	: Measured related to the design of the product: It is required to use completely sealed articles with a long service life maintenance.

3. Exposure estimation and reference to its source

Consumer uses relates to already diluted products which will further be neutralized quickly in the sewer, well before reaching a WWTP or surface water. Therefore, consumer use of NaOH is adequately under control for the environment.

Inhalation-local (acute): The calculated short-term exposure of NaOH (1,6 mg/m³) is slightly higher than the long term DNEL for inhalation of 1 mg/m³ but smaller than the short term occupational exposure limit of 2 mg/m³. Furthermore, NaOH will be rapidly neutralised as a result of its reaction with CO₂ (or other acids).

Inhalation-local (long term): Since the NaOH concentration and amount handled are smaller compared to professional use and since the DNEL and RMMs are similar, safe use can be concluded for consumer use.

4. Guidance to Downstream User to evaluate whether he works inside the boundaries set by the Exposure Scenario
